

News From the Pond

Room 6

For the Week of September 8-11

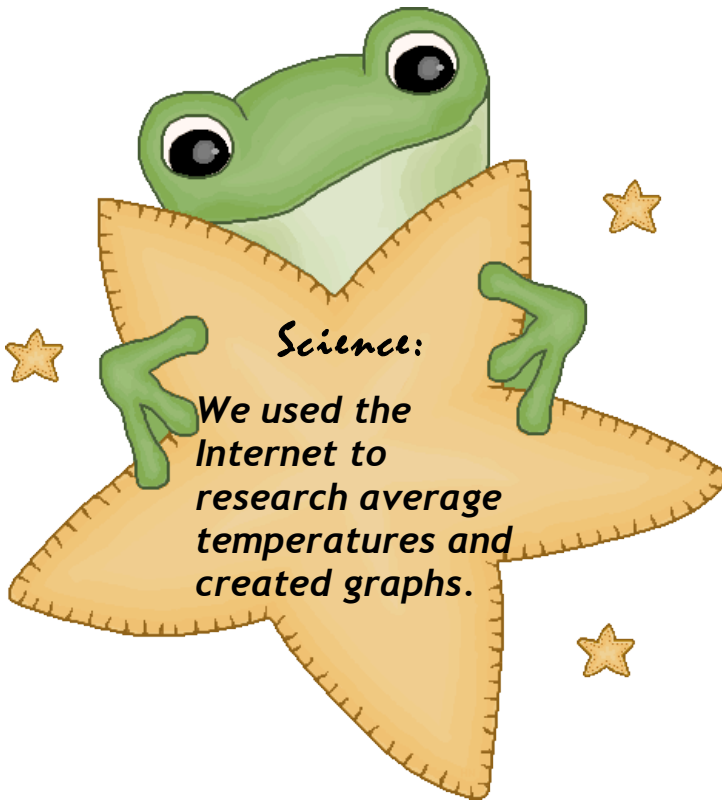

Math

We continue to work on subtraction strategies for numbers through 18. It is helpful for students to practice both addition and subtraction facts every night.

Reading

We began our first story in our basal, *Ann's First Day*. We focused on making logical predictions and identifying points in the story where we realized our predictions were correct or incorrect. Even when we do not predict correctly, we are practicing an important comprehension skill; thinking about reading.

Science:

We used the Internet to research average temperatures and created graphs.

Spelling:

The best way to review for the test is to write sentences using words from the list in context.

Social Studies

Students analyzed how people can work together to improve communities.
