## Section Descriptions

**Pacing guide** - Pacing guides are timelines showing content to cover at specific points over the course of a year. This includes all the information needed for teachers to draft lesson plans. Includes items for a particular unit such as:

- academic vocabulary lists
- common assessments
- connections to district adopted curriculum resources
- essential questions
- content standards and indicators
- critical content and skills

**Standards, strands and indicators** – These are concise, written descriptions of what students are expected to know and can do within the course. Generally, standards are first adopted by the state and then the Omaha Public Schools Board of Education adopts the final versions used for the courses.

**Scope and sequence** - *Scope* is the material or skills to be taught, and *sequence* is the order in which you teach the information. This is brief and is used as an overview of the progression of learning (e.g. K-5, 6-8, 9-12).

**Proficiency Scales/Proficiency Level Descriptors** - Proficiency scales or descriptors are written for a content standard or concept. They define what students should know and can do for each level of learning.

**Academic Vocabulary List with Definitions** – This list includes the terms that should be taught using the Marzano 6-Step Vocabulary Process and has the appropriate definitions to terms listed here. There should be approximately 90 terms per course/grade level content area for the year. Additional content specific vocabulary is listed within the Pacing Guide.

**District Adopted Resources** – This lists the core materials (textbooks, web resources, and supplemental materials) selected for the course as approved by the Omaha Public Schools Board of Education.

## Unit One: The World in Transition; Building a Foundation (Origins-c. 1400 CE)

Overview: This introductory unit addresses the foundation of the modern era by examining the rise of human civilizations into empires and the development of the world's major belief systems. Students will investigate the consequences of the collapse of classical civilizations in Europe, North Africa, and Asia. The unit also studies the emergence of a new Islamic empire and the consequences of its political and religious dominance in parts of Europe, Africa and Asia. The unit covers the social and governmental structures of Asian, African, and American cultures and the challenges faced by these societies. This unit emphasizes the importance of trade and the cultural exchanges that took place during the 1000-1400s time period which set the stage for the modern world.

## Unit Two: Exploration and Empire (c. 1400-1750)

Overview: Unit two focusses on the growth of maritime empires in Europe and land-based empires in Asia. This unit introduces a larger, interconnected world due to Chinese and European voyages of the 15th and 16th centuries. Changes in European culture and politics such as the Renaissance, Reformation, Scientific Revolution and the Commercial Revolution led to eventual dominance in maritime trade and politics. Europeans developed existing maritime technologies to explore and expanding into the Atlantic and Indian Ocean basin. Emphasis should be placed on the exchanges of culture, ideas, plants, animals and diseases through the Columbian Exchange. Intensified trade and conquest led to tremendous global change, including cultural diffusion, the trans-Atlantic slave trade, decimation of American peoples and societies, new colonial societies, and worldwide competition for resources, land, and power. Simultaneously, in the Middle East, South Asia and East Asia land-based empires were established. The Ottoman Empire, Safavid Empire and the Mughal Empire were established and expanded in the Middle East and South Asia while the Qing (Manchu) Dynasty and Tokugawa Shogunate established centralized control in China and Japan.

## Unit Three: Absolutism and Revolution (c. 1600-1820)

Overview: Unit three Analyzes the changes and continuities in governments and the factors that led to revolution in America, France, Haiti, & Latin America. The maritime empires established in unit 2 contributed a global competition for resources and power. This competition resulted in conflict and war throughout the maritime empires in overseas colonies. As the power monarchs of European Empires continued to grow, Enlightenment thought questioned established traditions in governance and culture. New ideologies critical of social inequality and ideas of natural rights and representative government resulted in rebellions and revolutions against absolutist, monarchical governments. These rebellions and revolutions led to new states in North and South America as well as the Caribbean and led to a power shift in the existing European political structure.

## Unit Four: Industrialization, Nationalism, and Imperialism (c. 1750-1900)

Overview: Unit four analyzes the tremendous changes around the world due to industrialization. A variety of factors such as geography, urbanization, improved agricultural production, and access to foreign resources and capital contributed to an increase in industrial production and eventually the Industrial Revolution. New methods of industrial production become more common in parts of Northwestern Europe and spread to other parts of Europe, the United States, Russia and Japan whereas Middle Eastern and Asian countries share in global manufacturing declined. Life in the industrial age raised the living conditions for some, yet for many, life was difficult, spawning concerns about health and education. Equipped with Enlightenment ideals and the new technologies of the time period, nationalist movements began to spread throughout Europe. As many European nations and the United States began to modernize and nationalize, this created a hunger for land and resources which resulted in numerous global conflicts and imperialism. Imperialism and the spread of Western ideas also led to the spread of nationalism to non-Western peoples, often resulting in nationalist uprisings against imperialist powers. Finally, industrialization and imperialism led to widespread internal and international migration.

## Unit Five: World Wars Era

Overview: Imperialism and nationalist movements of the late 19th Century set the stage for the global major conflict(s) of the 20th. As the now-dominant European nations scrambled for territory around the world, the question of territory held by the weakening Ottoman Empire caused tensions to rise between rival states. Nationalism, imperialism and militarism continued to grow, and Europe polarized into two factions ready to go to war with one another—which eventually led to the horrors of the Great War. In the aftermath, the ill-conceived Treaty of Versailles combined with the worldwide Great Depression allowed leaders such as Adolf Hitler and Benito Mussolini to seize power. The resurgence of nationalism and imperialism in Italy Germany and the imperialistic urges that sprang from it led to a second devastating conflict on the European continent. Simultaneously, Japan’s aggression in the East and conflict with the West over hegemony in East and Southeast Asia led to war in that region and ultimately a conflict with the United States.

## Unit Six: The World Since 1945

**Overview:** This unit focuses on the rapid changes that occurred after World War II. European colonizers were weakened by war and strengthening nationalist movements led to eventual emergence of new nations around the globe. Many emerging nations after years of political and economic control by outsiders struggled to achieve stability, and often became pawns in the competition that emerged between the world's two superpowers in the Cold War. Many of the world's problems were exacerbated by rapid expansion of technology and pressures from population growth: war, human rights violations, poverty, genocide, globalization and environmental issues were and continue to be real life hurdles mankind must jump over in the 21st century.

## Course Standards Overview

**Standards:** At the highest level of generality, content area standards include a set of broad, overarching content-based statements that describe the basic cognitive, affective, or psychomotor expectations of students. They reflect long-term goals for learning. These comprehensive statements are not grade level specific and cover the big ideas of the course.

**Indicators:** Under each standard are indicators, which further describe what a student must know and be able to do to meet the standard. Indicators are performance, based statements that provide educators with a clear understanding of the expected level of student learning and guidance. Indicators provide guidance for an assessment of student learning. Indicators also help to distinguish expectations between grade levels.

Nebraska Department of Education Content Area Standards Reference Guide:

[https://www.education.ne.gov/academicstandards/Documents/Nebraska%20Standards%20Reference%20Guide\\_Final.pdf](https://www.education.ne.gov/academicstandards/Documents/Nebraska%20Standards%20Reference%20Guide_Final.pdf)

Organization and Structure of Nebraska’s Social Studies Standards The overall structure of Nebraska’s Social Studies Standards reflects the two-tier structure common across all Nebraska content area standards. The two levels include standards and indicators. At the broadest level, standards include broad, overarching content-based statements that describe the basic cognitive, affective, or psychomotor expectations of student learning. The standards, across all grade levels, reflect long-term goals for learning. Indicators further describe what students must know and be able to do to meet the standard and provide guidance related to classroom instruction. Additionally, the indicators provide guidance related to the assessment of student learning. In addition to standards and indicators, the Nebraska Social Studies standards provide examples. The “For example...” statements provide guidance relative to topics that may be included in the locally determined curriculum. These suggestions may be used to meet the learning expectations of the standards and indicators. For grades K-8, the standards and indicators are written at grade level. The K-8 standards and indicators are organized within four disciplines: Civics, Economics, Geography, and History. Within those disciplines, standards and indicators are grouped by big ideas. Big ideas are concepts, themes, or issues that give meaning and connection to facts and skills (Wiggins and McTighe, 2005, p. 5). The high school standards and indicators are written within one grade band (HS = 9-12), and they are also organized by discipline and big ideas. Prior to each grade level and the high school grade band, a summary statement and theme are included. This provides a high-level overview of what students are expected to learn at that grade level. In addition to a common structure for content area standards, a consistent numbering system is used for content area standards. (Source: Nebraska Social Studies Standards, 2019)

An example of the Nebraska Social Studies Standards numbering system is as follows:

<b>SS.8.1.2.a</b>
SS = content area
8 = grade level
1 = discipline
2 = standard
a = indicator

## Use of Video in Instruction

The use of video (i.e., DVDs, videotapes, streaming video, YouTube, etc.), when used to judiciously, can effectively promote student learning in the classroom. Brain research shows that students in grades K-7 can generally attend to instruction for 5-12 minutes while older adolescents can attend for approximately 12-15 minutes before their attention lags (Jensen, 1998). Researchers have suggested that students' focus wanes after 10 minutes of passive viewing of videos (Adams and Hamm, 2001). So, while videos can enrich educational experiences, educators must be conscious of time constraints on a student's ability to attend and process visual media (Schulz, 2006).

When using video, district best practices must be considered and all of the following conditions must be met:

- Copyright laws must always be followed.
- Video may not be used during instructional time for the purpose of entertainment, incentives, or reward. This is a copyright violation.
- The video must be previewed by the instructor prior to classroom use.
- Video that is used in a lesson should be documented in the lesson plan.
- Excerpts should be generally used along with activities requiring active student involvement such as discussion or analysis of the media.
- Complete videos that last more than one instructional period should be used only if they are approved as part of an established curriculum. These resources should be written into curriculum guides and/or maintained by the content area supervisor. A public performance license is required when showing video for entertainment purposes and is permitted only during non-instructional time (i.e. after school, during recess, movie nights, etc.) Movie Licensing USA [www.movlic.com/](http://www.movlic.com/) provides public performance license for schools.
